OFFSHORE ASSET MONITORING

OFFSHORE ASSET MONITORING

A Product for Real-Time Vessel Tracking in Specific Zones

Offshore Assets

Offshore assets include underwater cables and pipelines, offshore platforms, and navigation aids that require continuous monitoring and supervision.

Applications

SHIP SECTOR

Real-time fleet monitoring and management to enhance operational awareness and provide immediate access to vessel positions.

PORT SECTOR

Monitoring and control of vessel traffic in navigation channels and busy port areas to improve maritime traffic management.

FISHING SECTOR

Monitoring vessels operating within fishing zones and supervising activities in designated fishing areas.

Benefits

- Real-time vessel position tracking
- Continuous monitoring of designated zones
- Enhanced awareness of maritime traffic activities
- Improved protection of offshore infrastructure and assets

Offshore Asset Protection

By continuously monitoring vessel movements within designated areas, the system enables rapid identification of traffic activities and helps reduce the risk of damage to offshore equipment and infrastructure.

PROTECT YOUR OFFSHORE ASSETS FROM ANY RISK OF INCIDENT BY SHIP COLLISION OR ANCHORS
